Proposed Role in Metnet

Comparative studies of the magnetic and plasma observations in the frame of the Yinghuo-1 and MPPM missions

Experience Related to the Investigation

Dr. Lei Li has more than 10 years of scientific work in space physics, with interests principally in terrestrial magnetospheric particle dynamics, Martian plasma environment, etc. She has also participated in several Chinese space exploration programs, such as Double Star for the earth magnetosphere, Yinghuo-1 for the Martian environment and Chang'E-3 the lunar lander, involved in scientific research, instrument design, and data analysis
